

SMD desoldering tips (pair), for Talon, series 500/302 °C

The TATC-503 SMD desoldering tips from METCAL have been specially developed for the Talon 500 series soldering stations and are supplied in a practical pair. With a maximum soldering tip temperature of 302 °C, the tips are ideal for fine desoldering work on SMD components.

The tips are knife-shaped and straight, which enables precise handling and pinpoint desoldering of even small components. Thanks to their robust workmanship, they guarantee long-term readiness for use and consistently reliable performance during repeated desoldering processes.

Thanks to their compatibility with Talon Series 500 handpieces, the TATC-503 tips can be exchanged quickly, making them ideal for repairs, prototyping or series production in electronics.

Item no.	WL13940
Model	TATC-503
Manufacturer	METCAL
Manufacturer article no.	TATC-503
GPSR manufacturer data	OK International Ltd Eagle Close, Chandlers Ford GB-SO53 4NF Hampshire www.metcal.com
Sales unit	1 pair
Content unit	1 pair
Soldering tip temperature (max.)	302 °C
Tip series	TATC
Tip shape	knife-shaped
Tip alignment	straight
Matching handpiece	Talon Serie 500
ESD compliant	no
