

Protective lens 52 mm

The protective lens model 108518 from TAGARNO is designed for all of the manufacturer's digital microscopes and is used to protect the optics from dust, scratches and other external influences. With a diameter of 52 mm, it can be fitted precisely and fits seamlessly into existing systems.

As it is a protective lens without magnification, the optical performance of the microscope remains unchanged while the sensitive lens is protected at the same time. This helps to maintain image quality in the long term and reduce maintenance costs.

The protective lens is therefore a useful addition for the daily use of digital microscopes, especially in environments where the optics are regularly exposed to stress.

- for all Tagarno digital microscopes

Item no.	WL25806
Model	108518
Manufacturer	TAGARNO
Manufacturer article no.	108518
GPSR manufacturer data	TAGARNO AS

Finlandsvej 2
DK-8700 Horsens
