

## Illuminated stand magnifier scribolux, 2.8x, 7 dpt., D=100x75 mm

---

The illuminated scribolux stand magnifier from Eschenbach offers plenty of space for writing thanks to the large distance between the lens and the contact surface and the open magnifier base. In addition to a comfortable oblique view, the magnifier scores with a particularly scratch-resistant lens, high visual comfort, bright, even and glare-free illumination, which allows shadow-free, ambidextrous work under the scratch-resistant lens.

- High image brilliance and large field of view
- New with pushbutton switch for easy switching on and off
- New with practical automatic switch-off after 30 minutes
- Aspherical PXM® light lens, cera-tec® coated for sharp, distortion-free imaging
- Distance lens - contact surface: 7.5 cm (lens apex)
- Powerful SMD LED illumination
- For all aspherical magnifiers and reading glasses from Eschenbach, the adjustment

distance (aE), distance eye to virtual image, is exactly 400 mm. Thus, with reading glasses, addition + 2.5 dpt, the image can be seen sharply.

- Microfiber bag to protect the lens included. The bag is also suitable for cleaning the lens.

item number	WL31701
model	Scribolux
manufacturer	ESCHENBACH
manufacturer item number	156512
length	110 mm
width	110 mm
height	110 mm
order unit	1 piece
content unit	1 piece
capacity in liter	1.331 l
dioptries	7 dpt
Lamp or magnifier type	workplace light
magnification	2,8x
ESD safe	no
