Ultimus I - II metering device

High-precision tabletop dispenser for innovative applications of adhesives, oils, greases, epoxies, silicones, sealants, cyanoacrylates, solder pastes and other assembly fluids dispensed with cartridges.
The Ultimus™ I-II dispensers feature a digital display of all fluid dispensing settings and a time setting of up to 0.0001 seconds, providing exceptional control for medical devices, electronics and other critical dispensing processes.

Ultimus I features constant air pressure control from 0-7 bar (0-100 psi) and provides greater control when dispensing any type of fluid.

Ultimus II has a constant discharge pressure control of 0-1 bar (0-15 psi) and offers better control when dispensing thin or low viscosity fluids.
Both Ultimus I and Ultimus II have constant air pressure regulation, which makes adjusting the pressure more intuitive. The high-precision regulation of the air pressure makes these liquid dispensers reliable and user-friendly.

The digital display of all dispensing parameters allows for better process control as you can monitor all settings on the screen. These dispensers also allow the user to store up to 16 dispensing programs. A time setting of ≥ 0.0001 provides a higher level of precision. With a universal power supply and multilingual display options, this liquid dispenser promotes worldwide use and support. In addition, the operator lockout of the time setting helps maintain a consistent dispensing process.

Item no.	**WL48234**
Model	ULTIMUS II
Manufacturer	NORDSON EFD
Manufacturer article no.	7002003
GPSR manufacturer data	Nordson Deutschland GmbH Kapellenstraße 12 DE-85622 Feldkirchen www.nordson.com
Sales unit	1 piece
Content unit	1 piece
Colour	blue
ESD compliant	no
