

Plaster strips 19x72mm,elastic skin colored,textile fabric,pack á 100 pieces

Patch strips ELASTIC A patch reliably covers minor injuries and protects the wound from germs and dirt. In this way it supports the healing process. A plaster consists of a soft wound dressing and an adhesive tape which fixes the wound dressing in the right place. But a good quick-action wound dressing can do more than that: it must hold securely even in places where there is a lot of movement, must not slip and must allow the skin underneath to breathe. The ELASTIC plaster strips meet precisely these requirements. They consist of a particularly elastic textile fabric that follows every movement and holds reliably over the wound. The plaster strips are therefore ideal for fingers, joints and all areas that are subject to a lot of movement.

skin-coloured textile fabric especially elastic for extra good hold hypoallergenic for very good skin compatibility breathable very hygienic, as each plaster is individually packed and sealed 1 piece per pack Size of a plaster strip: 19 x 72 mm

- made of elastic textile fabric
- hypoallergenic and breathable
- skin-coloured
- individually sealed per pack
