

Hygostar protective visor, PET 350 x 225mm, transparent

Protective visor 3S made of PET from Hygostar: This protective visor is made of transparent PET and offers the user optimal vision at all times, as it is double-sided fog-free and non-reflective. The plastic protective visor protects above all the eyes from liquid splashes and is also completely disinfectable. A further advantage is above all that the visor offers enough space to easily change face and breathing masks. In addition, it is comfortable during operations lasting several hours and also ideal for spectacle wearers. The protective visor made of PET consists of a soft foam cushion on the forehead and a flexible elastic band for an optimal fit. Hygienic side effect: The protective visor acts like a barrier and prevents the wearer from touching the face with his hands. This reduces the risk of further contamination. Features of the protective visor made of PET at a glance: ideal for spectacle wearers enough space to change face and breathing masks fog-free and non-reflective comfortable completely disinfectable additional protection for the eyes significantly less touching the face with the hands
