

## Room air filter unit SASOO - eliminates 99,995% of aerosols and viruses

### Description

SASOO fits in every room and every branch!

#### Powerful filter technology

HEPA HEPA filters are a proven and recommended technology for air pollution control, supported by scientific studies<sup>1)</sup>. They improve air quality, thereby reducing the risk of infection and, compared with other solutions, are a safe way of removing harmful germs from the air.

#### Environmentally friendly and low maintenance

Microorganisms and other particles are reliably separated by HEPA-H-14 filters and are thus filtered out of the room air in a sustainable manner. Of course sasoo is also equipped with such a powerful filter. With a reliability of 99.995 %, nanoscale particles such as viruses and bacteria are filtered out of the air. At the same time, the filters have a long service life, so they rarely need to be replaced. All this makes sasoo a low-maintenance device with an extremely low susceptibility to faults.

The Federal Institute for Occupational Safety and Health also advises using H14 filters.

#### The optimal solution is sasoo

sasoo demonstrably reduces the particle load for rooms up to 100 m<sup>2</sup> - and thus also the risk of infection. As a supplement to the usual hygiene measures, sasoo is a reliable and equally powerful

companion for the everyday life of your customers, partners, and those under your protection.

And here's how it works

- 1) Air contaminated with virus particles is sucked in at face level. A CO2 sensor continuously measures the air quality and gives an indication when additional ventilation is required.
- 2) The air flows through the HEPA filter. Aerosols, viruses and other fine particles in the nanoscale range are filtered out of the air to a separation efficiency of 99.995 %.
- 3) The activated charcoal filter also removes any odours.
- 4) The clean breathing air is returned into the room without draughts at the bottom of the unit.

- Ready for immediate use - plug in, switch on, off you go
- More security - filters 99.995% of viruses sucked in
- As quiet as a conversation - only 52 decibels
- Powerful - up to 100 m2 room size
- Fits in any room - only 0.25 m2 stand space
- Customizable - the look that suits you
- Year-round protection - also removes influenza viruses and pollen from the indoor air

## Product details

Room size (max.)	100 m <sup>2</sup>
item number	WL53370
Power consumption	500W, 4A
manufacturer	ULT
manufacturer item number	2-00211
dimensions (LxWxH)	60 cm x 60 cm x 175 cm
order unit	piece
Air volume flow	1000 m <sup>3</sup> /h
Volume (max.)	52 dBA
