

Soldering tip C105131, chisel, 2x 0.35 mm

C105 cartridges are the smallest of the JBC range. They are appropriate for soldering and repairing very small-sized components at high precision, even under a microscope. C105 cartridges work with NT105 Nano Soldering Iron and NP105 Nano Tweezers. JBC tips last 5 times longer than other brands thanks to the JBC Most Efficient Soldering System and the Sleep & Hibernation features.

Update: C105 Cartridge range will be discontinued and replaced by C115. Take under consideration that the C115 cartridges work with the tools NT115, AN115 and NP115. To use your NAN/NAS with the C115 cartridge, you need to:

- Acquire an Updating Kit for the station which includes the cartridge extractor and the set of tools
- Update the station with the latest Software version available

item number
