

Special soldering tips, for T245 soldering iron, C245909E

C245E Cartridges have been designed with a thicker iron layer what makes this tip ideal for tough and repetitive works in mass production. A thicker iron layer reduces the thermal efficiency.

They are appropriate for general soldering purposes and they are perfect for both SMD components or for applications with high power requirements such as ground plane soldering.

They work with T245 Handles.

They last 5 times longer than other brands thanks to the JBC Most Efficient Soldering System and the Sleep & Hibernation features.
