

## EPA RFID access control, turnstile right incl. SGT ProPlus

The SafeGuard Pro Plus DS is a modern grounding tester with integrated 3-arm turnstile for access control in ESD-protected areas. It enables simultaneous testing of shoes, ESD wrist straps and protective clothing. The results are clearly shown on an LCD display and automatically saved. Thanks to RFID technology, double foot electrode and audible-visual display, efficient and safe access control is guaranteed. In the event of a power failure, the turnstile automatically lowers to allow access. The software supplied enables flexible evaluation and management of the test data. Extended management software is available as an option.
