

Plastic Clear varnish, 1 Liter

ECS Plastic clear lacquer, 1 liter is a high-quality acrylic lacquer that is used for insulation, sealing and waterproofing. This transparent varnish is particularly suitable as corrosion protection for printed circuit boards. With excellent insulating properties, it reliably protects against moisture as well as inorganic, acidic and alkaline vapors. The varnish offers permanently good adhesion and can withstand temperatures between -70°C and +100°C, and even up to 120°C for short periods. Solderable and easy to repair, this clear lacquer ensures long-term protection of printed circuit boards. It is also ideal for re-insulating coils and as a universal clear varnish for metal, paper, signs and much more. Thanks to its adhesion to various materials such as metal, plastic, wood or glass, it can be used in many different ways. ECS Plastic complies with the MIL-I-460580 "Type Acrylic Resin" standard and is supplied in a practical 1-liter can.

- Clear varnish for insulation, sealing and sealing
- PLASTIC is a quick-drying, colorless, transparent acrylic varnish and suitable as a corrosion protection varnish for circuit boards
- PLASTIC has excellent insulating properties and protects against moisture and inorganic,

Products for the electronic industry

acidic and alkaline vapors

- PLASTIC has long-lasting good adhesion. Can be used in the temperature range between -70° C and +100° C and can be briefly exposed to temperatures up to a maximum of 120° C.
- The paint can be soldered through and enables repairs on circuit boards. Guarantees long-lasting protection of circuit boards, can be used for re-insulating coils and as a universal clear coat for metal, paper, signs, etc.
- PLASTIC sticks to metal, plastic, wood, cardboard, glass, etc. It does not drip and contains a UV indicator for quality control
- PLASTIC conforms to MIL-I-460580 "Type Acrylic Resin"
- Can
