

ESD women's sandal GX 165, S1P, W10, blue/pink, size 40

The high-tech MESH UPPER encloses the foot perfectly and guarantees the wearer lasting breathability, flexibility and unmistakable comfort. The air texture of the fabric guarantees optimum air circulation and thus ensures a permanently pleasant foot climate.

WOMEN'S FIT

The new SPORTY LIGHT sole has been specially developed to meet the needs of women's feet and therefore offers maximum comfort in your working environment. A high level of comfort and a pleasant soft footbed played a special role in the development. Thanks to anatomical specifications and state-of-the-art technologies, it was possible to develop a new women's outsole with maximum flexibility, dynamics and comfort. The unique lamellar profile is not only an eye-catcher, but also guarantees maximum slip resistance (SRC). Discover the highlights from the women's collection and be inspired! The puncture-resistant steel midsole is made of corrosion-resistant stainless steel and protects the foot against sharp objects such as nails. It has been optimally adapted to the last fit and foamed into the midsole material. This means that you are optimally protected even

during long and tough indoor and outdoor use.

The anatomically shaped steel toe cap protects the foot in the toe area against impacts of at least 200 joules and a compressive load of at least 15 kN, in accordance with EN ISO 20345:2012. Especially when kneeling, the toe area of the shoe may show signs of wear after some time. This can be significantly reduced with the help of the reinforced toe protection, thus increasing the service life of the shoe. Temperature-regulating properties are not only required, but expected, especially in everyday working life with high physical exertion. The aktiv-X functional lining stands for the highest quality, innovative technology and offers the wearer permanent, active moisture regulation. The aktiv-X functional lining has a moisture-regulating effect and ensures that the shoes dry quickly. It does not stain, is skin-friendly and abrasion-resistant.

Healthier working with the right cushioning. The new MPU-REBOUND-SYSTEM from ATLAS® enables noticeably gentle and fatigue-free walking. The innovative sole system forms the basis for this outstanding walking comfort and offers pressure relief, cushioning and dynamics for the wearer, thanks to the perfect combination of a pressure-relieving insole and the light and responsive MPU foam. The ATLAS® clima-stream® concept maximizes breathability, balances moisture inside the shoe and optimally regulates the temperature of the environment. The use of high-quality, particularly breathable upper material, the thermo-regulating inner lining and the Klima Komfort® insole ensure a unique wearing comfort. ATLAS® offers you a wide range of different insoles for orthopaedic insole care. The articles marked here are suitable for orthopaedic insoles in accordance with DGUV Rule 112-191. The marking on the shoe is decisive for this. The ATLAS women's models have been specially developed to meet the needs of women's feet and therefore offer maximum comfort in your working environment. A high level of comfort and a pleasant soft footbed played a special role in the development. Anatomical specifications and the latest technologies have made it possible to develop a women's model with maximum flexibility, dynamics and comfort.

- Sporty-Light sole technology
- Penetration resistance
- steel toe cap
- toe protection
- aktiv-X functional lining
- MPU-REBOUND-SYSTEM
- clima-stream concept
