

TL5000 Ergo

The extremely flat Leica TL5000 Ergo LED transmitted light base with automatic aperture has an extremely homogeneous bright field, optimized Rottermann Contrast™ and a low-reflection dark field.

The automatic aperture adjusts itself automatically according to the zoom position of the optics and always offers the best possible contrast for the respective specimen. With the large field of view of 65 mm diameter, even whole organisms can be ideally examined.

With full integration into the Leica LAS and LAS-AF software, the fully automated and coded TL5000 Ergo LED transmitted light base can also be used for reproducible tasks.
