

## Grid tube fastening set for Concept Ergo

---

---

The mounting set for grid tubes allows two grid tubes to be mounted securely and flexibly at any position along the rear of the Concept Ergo workbench - regardless of the existing standard holes. This means that grid tube accessories can be positioned exactly in the required module width, allowing individual adaptation to different workstation requirements. The set includes brackets for holding two grid tubes. The maximum load capacity is 100 kg per mounted module. The grid tubes themselves are not included in the scope of delivery and must be ordered separately.

- Contains brackets for two vertical grid tubes
- Can be attached anywhere on the back of the frame frame (independent of the standard holes at the rear)
- The load capacity for one module is 100 kg
- Vertical grid tube profiles must be ordered separately
