Linee di verifica del software

For products with strict size and distance requirements, use the verification line app on your TAGARNO digital microscope. The smart digital microscope software app allows you to add lines with custom tolerances over the microscope image. With the accurately calibrated verification lines overlaid, it's easy to perform output control and visual inspection of the PCB. If something doesn't look right, take a photo of the inspection with the microscope control panel. A mouse, keyboard, and the measurement app are required to use this application.
